DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harashina, US Patent No. 6673405 in view of Japanese Patents Nos. 2002-201334, 2000-119485 and 10-67942. Harashina discloses polyacetal compositions that may include all of the additives disclosed by applicant. See col. 2, line 40 through col. 18, line 31. Harashina expresses a preference for including guanamine compounds at col. 12, lines 13-61. The use of the patented compositions in automotive parts requiring reduced formaldehyde emissions is disclosed at col. 17, lines 45-63. Harashina indicates preferred methods for processing the compositions including the utilization of specific amounts of additives that overlap those of applicant's.

The Japanese Patents disclose polyacetal resin compositions that comprise an antioxidant and guanamine compound or derivatives thereof, that overlap with those antioxidants and guanamine compounds of the present claims.

See the English translation of 2002-201334 wherein additional additives including processing and heat stabilizers, long-chain fatty acids and benzotriazoles are disclosed at pages 4-6.

Art Unit: 1714

See the English translation of 2000-119485 wherein additional additives including processing and heat stabilizers, polyamides, long-chain fatty acids and benzotriazoles are disclosed at pages 5-8.

See the English translation of 10-067942 wherein additional additives including light and heat stabilizers, polyamides, long-chain fatty acids and benzotriazoles are disclosed at pages 8-10.

Applicant's presently claimed compositions include conventional components disclosed by the prior art references at their customary loadings and nothing of an unobvious nature is seen by selecting these conventional components and combining them into a composition for their art-recognized purposes.
